Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/938,230

Applicant(s)

KAMINOSONO, TAKESHI

Examiner

Trang U. Tran

Art Unit

2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Higuchi et al. (US Patent No. 5,673,090) in view of Harrison et al. (US Patent No. 6,532,004 B1).

In considering claim 1, Higuchi et al discloses all the claimed subject matter, note 1) the claimed a DVD device for sending out an analog image signal obtained on the basis of a reproducing signal of a DVD is met by the video recorder or player 17 (Fig. 1, col. 3, line 1 to col. 4, line 51), 2) the claimed a television circuit substrate for processing the analog image signal is met by the printed circuit board for television 143 (Fig. 1, col. 3, line 1 to col. 4, line 51), 3) the claimed a cabinet is met by the cabinet 11 (Figs. 1 and 7, col. 3, line 1 to col. 4, line 51), 4) the claimed a filter substrate in which a filter for forming a path for electrically connecting said DVD device to said television circuit substrate and also reducing a noise component flowing from the side of said DVD device through the path is formed is met by the printed circuit board for video 133 which is connected to the printed circuit board for television 143 by inserting the connector 15 (Fig. 2, col. 3, line 59 to col. 4, line 49), and 5) the claimed a shielding case for covering

Art Unit: 2614

said DVD device and said filter substrate is met by the shield plate 14 (Fig. 2, col. 3, line 55 to col. 4, line 49).

However, Higuchi et al explicitly do not disclose:

1) the claimed the video recorder or player is the DVD device. Harrison et al teach that the major components of system 20 are: an integrated unit (or module) 22, a remote control 24, and a laser readable disk 26, as mentioned above, disk 26 may be a conventional CD or other optically readable disk from which an appliance user can retrieve information on an available task or subject, examples only are video 1.1, video 2.0, DVD, and CDI disks (Fig. 1, col. 4, lines 4-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the DVD device as taught by Harrison et al into Higuchi et al's system in order to increase the quality of the video signal to be recorded and to be reproduced because DVD player has higher quality than video tape recoder.

2) the claimed a cabinet formed by an insulating material. The capability of using a cabinet formed by an insulating material is old and well known in the art. Therefore, the Official Notice is taken. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the old and well known of using a cabinet formed by an insulating material into Higuchi et al's system in order to prevent noises and temperature from outside.

In considering claim 3, the combination of Higuchi et al and Harrison et al disclose all the limitations of the instant invention as discussed in claim 1 above, except for providing the claimed wherein said television circuit substrate is electrically

Art Unit: 2614

connected to said filter substrate through metal pins whose one ends are fixed in one substrate of two kinds of substrates of said television circuit substrate and said filter substrate and the other ends can be inserted into and extracted from a connector provided in the other substrate of two kinds of substrates. The capability of using the connector which is connected through metal pins is old and well known in the art. Therefore, the Official Notice is taken. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the old and well known of using the connector which is connected through metal pins into the combination of Higuchi et al and Harrison et al's system since it merely amounts to selecting an alternative equivalent connector.

In considering claim 4, the claimed wherein said filter substrate and said television circuit substrate are provided in the vicinity each other sandwiching a wall portion of said shielding case is met by the printed circuit board for video 133 which is connected to the printed circuit board for television 143 by inserting the connector 15 (Fig. 2, col. 3, line 59 to col. 4, line 49) of Higuchi et al.

In considering claim 5, the claimed further comprising: a power substrate for supplying an operating power source provided in the vicinity of said shielding cover, wherein a ground level of the secondary side of said power substrate is electrically connected to said shielding case is met by the power switch 16 (Fig. 2, col. 3, line 48 to col. 4, line 49) of Higuchi et al.

In considering claim 6, the combination of Higuchi et al and Harrison et al disclose all the limitations of the instant invention as discussed in claim 1 above, except

Art Unit: 2614

for providing the claimed wherein a pattern acting as the ground level of the secondary side of said power substrate is directly connected to said shielding case. Using a pattern acting as the ground level of the secondary side of said power substrate is directly connected to said shielding case is old and well known in the art. Therefore, the Official Notice is taken. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the old and well known of using a pattern acting as the ground level of the secondary side of said power substrate is directly connected to said shielding case into the combination of Higuchi et al and Harrison et al's system since it merely selecting available pattern.

3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Higuchi et al. (US Patent No. 5,673,090) in view of Harrison et al. (US Patent No. 6,532,004 B1) and further in view of Morikawa et al. (US Patent No. 5,718,605).

In considering claim 2, Higuchi et al ('090) disclose the claimed a shielding cover mounted in said shielding pedestal, said DVD device and said filter substrate are arranged in the vicinity each other on said shielding pedestal, and wherein said shielding cover for covering said DVD device and said filter substrate is formed in a single case shape is met by the shield plate 14 (Fig. 2, col. 3, line 55 to col. 4, line 49).

However, the combination of Higuchi et al and Harrison et al explicitly do not disclose the claimed said shielding case comprises: a shielding pedestal made of a metal plate with a substantially plane shape.

Morikawa et al teach that a connector socket features a shield case 44, an upper lid of the shield 45, and a shield base plate 46 which are each made of conductive metal

Art Unit: 2614

plate, and which enclose and cover a housing 43 in such a way that the housing 43, which is composed of the insulating material, can be connected to a wiring plate 14 (see abstract and Fig. 1).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the shield case which made of conductive metal plate as taught by Morikawa et al into the combination of Higuchi et al and Harrison et al' system in order to prevent noises and temperature from outside.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kondo et al. (US Patent No. 6,434,326 B1) disclose information reproducing apparatus and method.

Beard (US Patent No. 6,172,712 B1) discloses television with hard disk drive.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Trang U. Tran whose telephone number is (703) 305-0090. The examiner can normally be reached on 8:00 AM - 5:30 PM, Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on (703) 305-4795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
